

=====

GENESIS PHONOLOGY MASTER CANON v0.1
MK147 + MK43 ULTRA LANGUAGE ARCHIVE

=====

STATUS

=====

This document defines:

- Sound
- Pronunciation
- Phonology
- Enunciation
- Word Construction

This document exists BEFORE the Lexicon.

The Lexicon cannot be built until the sounds
of Genesis are locked.

=====

CORE DESIGN PHILOSOPHY

=====

Genesis is not English.

Genesis is not Japanese.

Genesis borrows structural concepts from Japanese
while remaining entirely its own language.

Genesis is intended to sound:

- Ancient
- Flowing
- Architectural
- Measured
- Sacred

Genesis should NOT sound:

- Harsh
- Military
- Aggressive
- Orc-like
- Germanic

Good Genesis sounds:

- Aena
- Nae
- Vaele
- Aera
- Rin
- Sera
- Tal
- Tor
- Vel

Bad Genesis sounds:

- Kragg
- Blorg

Thrak
Skullcrusher

Wrong universe.

=====

FOUNDATIONAL RULE

=====

Genesis words are built from sounds.

NOT letters.

Letters merely record sounds.

Meaning emerges from sound groups.

Not individual characters.

=====

CANONICAL VOWELS

=====

A
E
I
O
U

These are the foundational vowels.

=====

SACRED VOWELS

=====

AE
AI

These are NOT combinations.

These are independent sounds.

They function as sacred phonetic units.

=====

AE

=====

Pronunciation:

AY

Examples:

AENA
AY-na

AERA
AY-ra

VAELE
VAY-le

Architect Semantic Cluster:

Authority
Inheritance
External Continuity
Above Boundary
Active State
Directed Ownership

AE is considered a dominant continuity vowel.

=====

AI

=====

Pronunciation:

EYE

Examples:

AAINA
EYE-na

AIRA
EYE-ra

Architect Semantic Cluster:

Reception
Internal Continuity
Containment
Below Boundary
Passive State
Received Authority

AI is considered a receptive continuity vowel.

=====

CONSONANTS

=====

The Genesis consonant inventory is:

V
L
N
M
R
T
S
K
D
H

=====

REMOVED CONSONANTS

=====

The following are NOT currently canonical:

G
B
P
Y

J
F
W
X
Q
Z
C

These may be added later through
historical language drift.

They do not exist in Classical Genesis.

=====

STANDALONE CONSONANTS

=====

Consonants may exist independently.

Examples:

N
L
R
M

This follows similar behavior to Japanese N.

These sounds may function as:

particles
contractions
grammatical markers
compressed forms

=====

LEGAL SOUND TABLE

HAI

SOUND CLUSTER RULE

Genesis is parsed through sound clusters.

NOT individual letters.

Examples:

AENA

Correct Parsing:

AE + NA

Pronunciation:

AY-na

Modern Meaning:

Energy

AAINA

Correct Parsing:

AI + NA

Pronunciation:

EYE-na

Potential Semantic Meaning:

Stored Energy
Received Energy
Internal Energy

AERA

Correct Parsing:

AE + RA

Pronunciation:

AY-ra

VAELE

Correct Parsing:

VAE + LE

Pronunciation:

VAY-le

VAELLE

Correct Parsing:

VAE + LLE

Pronunciation:

VAY-leh

or

VAY-lay

depending on dialect.

=====

DOUBLE CONSONANTS

=====

Double consonants indicate:

emphasis
elongation
continuity thickening
formal pronunciation

Example:

VAELE

versus

VAELLE

The second carries greater weight,
greater continuity,
or greater formal emphasis.

=====

PRONUNCIATION VARIANTS

=====

Some words possess:

Formal Reading
Common Reading

Example:

NAE

Formal:

na-ay

Architect Reading

Common:

nay

Village Reading

Both are correct.

Meaning emerges through context.

This allows natural linguistic drift
while preserving ancient forms.

=====

ARCHITECTURAL SEMANTIC PHONOLOGY

=====

Certain sounds carry meaning.

AE

Authority
Inheritance
External Continuity
Active State

AI

Reception
Containment
Internal Continuity
Passive State

RIN

Persistence
Duration
Continuity

KOR

Collapse
Realization
Resolution

VEL

Field
Environment
Propagation

SHA

Boundary
Containment
Location

EN

Identity
Thingness
Self-state

NA

Expression
Manifestation
Field-State

=====

WORD GENERATION RULE

=====

Genesis words are NOT invented.

Genesis words are derived.

Process:

Meaning
↓
Concept
↓
Sound Cluster
↓
Word

Example:

Friend

Definition:

Persistent Relationship

Potential Formation:

REL + RIN

Relrin

Gate

Definition:

Controlled Boundary

Potential Formation:

SHA + TOR

Shator

Road

Definition:

Persistent Propagation Path

Potential Formation:

VE + RIN

Verin

=====

COMPRESSION RULE

=====

Architect Language:

Kai Tor En

Compression:

Kaien

Gen Kor En

Compression:

Genken

Rin Tal Ael

Compression:

Rintel

Compression follows:

Repeated sounds merge.
Middle particles disappear.
Identity roots dominate.
Sacred vowels remain intact.

=====

PHONOLOGICAL LAW

=====

Genesis speakers hear meaning
through sound structure.

A native Genesis speaker does not hear:

letters

A native Genesis speaker hears:

continuity
inheritance
boundary

persistence
collapse
identity

encoded into sound.

Therefore:

AENA

is not:

A + E + N + A

It is:

AE + NA

A sound structure.

A meaning structure.

A continuity structure.

=====

CANONICAL LOCKS

=====

LOCKED:

A
E
I
O
U

AE
AI

V
L
N
M
R
T
S
K
D
H

LOCKED:

Sound clusters carry meaning.

LOCKED:

Genesis words are generated,
not invented.

LOCKED:

Formal and common pronunciations
may coexist.

LOCKED:

AE and AI are sacred phonetic units.
